Disclaimer:

The information in this book have been collected over years. The main problem is that there are not many open sources to get information about this sensitive field. Although I tried to verify the information from different sources it may be that there are mistakes. Please do not hesitate to contact me if you discover any wrong description.

20000 – 30000 kHz	363
TABLES	387
Allocation of International Call Signs	387
Alphabetical List of Country Codes	391
Abbreviations	403

General

Our software Frequency Manager is meanwhile available since 1994. Very often we heard the question from our customer if it may be possible to have it in printed form.

Here it is!

The amount of information in our electronic database is very huge. We tried to combine them in a way that the in number of pages are not too large. In this version we added several thousand of NDB frequencies from the medium frequency range.

Disclaimer

Please keep in mind that listening to radio transmitter outside the broadcast or amateur radio bands may be forbidden in your country by law.

Table description

Frequency	The frequency in kHz of the transmission
Mode	This field contains the used mode during transmission. For an explanation to the different modes please refer to our "Technical Handbook for Radio Monitoring HF"
Mode Parameter	This field contains a combination of signal parameter: B: the symbolrate of the signal S: the shift in Hz Ch: the number of channels ChS : the frequency distance between channels
Callsign	The callsign of the user
User	The user of this frequency
Country	The country of the user

There are several rows in the database which are written in italics and where the background has a grey shade. The locations of these stations have been confirmed by a professional direction finder system.
